

The schematic diagram illustrates the battery charging circuit. It features three main components: a voltage booster (ELEVADOR1, MT3608), a battery charger (CARGADOR1, TP4056), and a battery (BATERIA1, AFC12-S02DCC-00). The voltage booster is powered by VBAT and its output is connected to the battery charger's VCC pin. The battery charger is powered by a +5V source and its output is connected to the battery. The battery is connected to ground. The diagram includes various pins and components like resistors and capacitors.
